JournalXpress
From **MPS**

Ultrafast journal production

We have reengineered the journal content production process with accelerated delivery for print, web, and mobile devices. This is a result of our continuous innovation in workflows.

Journal Production Management
We coordinate closely with all stakeholders to ensure that issues are published on schedule and with highest accuracy. We provide real-time status updates through an online dashboard.

Editorial
MPS has a vast pool of experienced editorial resources to ensure that your content meets global standards. We have expertise in various disciplines including social sciences, humanities, management, economics, science, technology, and medicine.

XML-Based Composition
Journals are expertly typeset using automated and efficient workflows for 3B2, InDesign, and LaTeX, with simultaneous print and web deliverables.

Delivery on Mobile Devices Including iPad
Enhances multimedia user experience including panoramic and 360º views. Our publishing solutions are based on both the Adobe Digital Publishing Suite and native apps.

MPS WEPro
Flagship editing tool for structuring and editing that produces XML on the fly

MPS AutoComp
Auto composition tool that produces quality layouts instantly, available with remote access

MPS AMS
Intelligent artwork management system for graphics and multimedia production

MPS OPS
Collaborative proof management system that enables online corrections by authors and editors

Journal Track
A hosted platform for comprehensively handling the tracking and reporting needs of the journal production process

Key **differentiators...**

In addition to robust journal production processes, MPS also offers the following value-added services and provides a one-stop destination for publishers:

- MPS Insight, a robust COUNTER-compliant reporting system for in-depth analytics on library usage
- Fulfillment services for journal order and subscription management
- Online ContentStore for hosting and distribution of content
- CreativeStudio for graphics design and delivery to print, web, and mobile devices
- Animated and interactive content
- Content transformation and conversion services including EPUB3 and HTML5
